bigVAULT Enterprise Software
Product Data Sheet

bigVAULT's Enterprise Software combines a superior online file system with a powerful framework for backing up, distributing, sharing and managing information online. bigVAULT's Enterprise Software easily integrates into existing e-business applications. It is a valuable, cost-effective addition to any business.

The diverse information technology team under the bigVAULT umbrella has created a secure, comprehensive and professional online storage environment for businesses to offer their customers and employees the best in online file management and backup. bigVAULT's technology-neutral architecture is designed to integrate directly into existing online services, making for an uncomplicated and seamless user experience.

Turn bigVAULT's core competency into success for your business.

bigVAULT's Enterprise Software includes

- Online File Management with bigVAULT Premiere
- *bigVAULT Plus
- Management with **bigVAULT Administrative Module (BAM)**
- Optional Branded site.
- Optional Push Content delivery feature

*One Client License. Additional Clients available in license packs.

Online File Management
bigVAULT Premiere is among the most robust online storage services in the industry. This "Digital Safe Deposit Vault" on the web is an inspired combination of bigVAULT's Online File System (bvOFS), bigVAULT Drive (bvDRIVE), and bigVAULT Office Collaboration.

bvOFS is an innovative way of storing, accessing, sharing and organizing your electronic information in a single place. bvOFS is a file system in a database. From the users perspective, bvOFS looks exactly like any other networked drive on your file system. However, users can perform many tasks with bvOFS that are not possible using standard file systems.

bvOFs provides intuitive file management interface that allows users to move, rename, and delete files; create sub-vaults; search for files; and view their information in a familiar format.

Multiple-File Sharing Options

bvOFS offers three powerful user-initiated ways of sharing both sub-vaults and files with anyone the user chooses while controlling the level of access to shared files.

Visitor Access - bigVAULT"s "Visitor Access" password is a unique proprietary feature whereby users can assign a Visitor password to any file and/or sub-vault in their Main Vault. By utilizing our patent-pending "Date-Time Lock" function, Visitor passwords can be set with an expiration date and time. Moreover, all Visitor passwords can be set with an expiration date and time, and Visitors may be granted "Upload" rights.

Vault Mail - Vault Mail allows users to email a hyperlink to any file in their vault, to any email address. The recipient does not have to have a bigVAULT account. Access requires proper entry of a bigVAULT generated access code, that is included in the vault mail message, and the recipient's proper email address. Users may set an expiration date and time for vault mail access to expire and a maximum number a times the recipient(s) may download the file.

Incoming Vault - This feature allows bigVAULT users to move or copy a file from their Vault to another bigVAULT user's Vault with the proper authorization.

bigVAULT Drive gives you direct access to your online bigVAULT Premiere account as if it were a local drive on your computer. You can map a drive letter to your account so you can use Windows Explorer or Windows Commander to drag and drop files back and forth between your computer and your bigVAULT Premiere accounts.

***bigVAULT's Office Collaboration gives you instant access to your most valuable communication tools: email, address book, calendar, bookmarks, expense reports, notepad and more.

Backup

bigVAULT Plus is a down-loadable client side backup software solution that works in conjunction with bvOFS. bigVAULT users can backup and restore information to and from bvOFS accounts including scheduled full automatic backups or incremental backups.

Management

bigVAULT's Administrative Module (BAM) provides administrative tools that put the customer in control of the Storage. BAM is easy-to-use with a password – protected Web interface providing real-time quick and easy management of storage. Through BAM administrators can:

- add new users and remove existing users,
- establish group and user management levels,
- view and edit individual user account settings, such as increasing storage quotas and deleting accounts, and
- generate activity logs including login, registration and user activities.

BAM includes the following features:

- Login URL – ALL BAM features accessible through any Web browser
  - BAM links to Customer's server at bigVAULT.com through their web site.
  - Administrator Login, User Login, Visitor Login
- System Administrators
  - Create Groups & Group Administrators
  - Set Group Parameters, Limitations and Policies
  - Create Users and Edit User Rights, Passwords and Disable
  - Set Parameters for Archive (if archive option is chosen)
  - Push Content across Groups (If content delivery option chosen)
  - Run Reports across Groups
- ***Group Administrators**
  - Create Users for Group and Edit Rights, Passwords and Disable
  - Push Content within Group (If content delivery option chosen)
  - Run Reports within Group
- *Groups
  - User rights may be limited by group administrator or system administrator
- *Users
  - May chose files for archival (If archive option chosen)
  - May belong to multiple groups, having different rights with each.
- *File and Vault Permission
  - System Administrators may set for Groups
  - Group Administrators may set for users
  - Users may set for Visitors
    - Full Control
    - Upload Only
    - View Only
    - Upload and View Only (no delete)
    - All Vault permissions propagate to sub-vaults and files within it.

Branded Look and Feel with Seamless Integration (Optional)

Fully customizable user interface displays your company logo and branding information. Our API (Application Programming Interface) is based upon open industry standards providing transparent, and secure access between your end-users and the bvOFS.

Push Content Delivery (Optional)

Our "Push Content Delivery " feature allows you to pre-define the attributes of each user's account to ensure that users receive the information determined within the parameters of their account. As the administrator you and control the what, how, who and when of content distribution. Pre-defined attributes can be modified at any time.

bigVAULT"s Enterprise Solutions can be customized for specific business-to-business (B-to-B) applications. The development of B-to-B services is provided either as custom software development or through the licensing of proprietary software or services.

Infrastructure

Our state-of-the-art online file system was designed with security, scalability, and reliability in mind. Moreover, our world-class "data-centric" storage infrastructure was built with our intelliSTOR technology incorporating best of breed and proprietary security measures, comprehensive storage management, scalability, reliability and multi-layered redundancy.

Security

bigVAULT's Enterprise Software supports Secure Socket layer (SSL) Encryption. SSL is the standard for the secure transmission of data online. SSL operates by layering a security protocol of an underlying reliable connection-oriented transport protocol. This is done in a manner transparent to the application utilizing the SSL protocol. Once the SSL protocol is in place, to guarantee the highest security, the encryption coding is continually modified.

*** Features not yet released. Available pursuant to future releases and upgrades.**

Implementation

Because Scalability, Security, Reliability and Flexibility are the cornerstones upon which bigVAULT's Enterpise Software was built, our software can administer a large number of users as well as manage storage from a variety of NAS and SAN configurations. The bigVAULT team will assess your organization's infrastructure and develop a suitable implementation strategy that promises rapid and effective execution.

Support

bigVAULT's highly skilled staff imparts excellence in customer service and support. As an Enterprise level Customer your receive:

- Set-up and training
- Dedicated account representative
- Rapid response from qualified experts with support issue tracking

Benefits of bigVAULT Enterprise Software

- Universal Access
- Seamless Integration
- Encrypted File Transfer (SSL)
- Easy-to-use web based tools and clients
- Reporting and Logging Capabilities
- High security, scalability, reliability, and flexibility
- Low Cost
